THE DEFEAT OF THE DEFEAT

The device developed by BEST and II-110 helps the visually-challenged before boarding a bus. "Take a moment to think about the visually impaired before getting on the bus," says the operator of the bus. The device is a small box that emits a sound when the bus arrives at the stop. It is attached to the bus and is portable, so it can be easily carried around by passengers. The device is activated by pressing a button on the bus. The device also has a feature that allows the visually impaired to receive real-time information about the bus route and stop times. The device is designed to be user-friendly and to provide a comfortable experience for all passengers. The device is available for purchase at the BEST office in the city. The device is a small, portable device that can be easily carried around by passengers. It is activated by pressing a button on the bus.
